

Contents

1. Introduction	1
1.1 Advantages of Integrated Optics	2
1.1.1 Comparison of Optical Fibers with Other Interconnectors	3
1.1.2 Comparison of Optical Integrated Circuits with Electrical Integrated Circuits	7
1.2 Substrate Materials for Optical Integrated Circuits	9
1.2.1 Hybrid Versus Monolithic Approach	9
1.2.2 III-V and II-VI Ternary Systems	10
1.2.3 Hybrid OIC's in LiNbO_3	12
1.2.4 Organization of this Book	12
2. Optical Waveguide Modes	17
2.1 Modes in a Planar Waveguide Structure	17
2.1.1 Theoretical Description of the Modes of a Three-Layer Planar Waveguide	17
2.1.2 Cutoff Conditions	19
2.1.3 Experimental Observation of Waveguide Modes	20
2.2 The Ray-Optic Approach to Optical Mode Theory	24
2.2.1 Ray Patterns in the Three-Layer Planar Waveguide	25
2.2.2 The Discrete Nature of the Propagation Constant β	28
Problems	29
3. Theory of Optical Waveguides	31
3.1 Planar Waveguides	31
3.1.1 The Basic Three-Layer Planar Waveguide	31
3.1.2 The Symmetric Waveguide	34
3.1.3 The Asymmetric Waveguide	35
3.2 Rectangular Waveguides	37
3.2.1 Channel Waveguides	37
3.2.2 Strip-Loaded Waveguides	42
Problems	45

4. Waveguide Fabrication Techniques	47
4.1 Deposited Thin Films.....	47
4.1.1 Sputtered Dielectric Films.....	47
4.1.2 Deposition from Solutions.....	50
4.1.3 Organosilicon Films.....	50
4.2 Substitutional Dopant Atoms.....	51
4.2.1 Diffused Dopants.....	51
4.2.2 Ion Exchange and Migration.....	52
4.2.3 Ion Implantation.....	53
4.3 Carrier-Concentration-Reduction Waveguides.....	56
4.3.1 Basic Properties of Carrier-Concentration-Reduction Waveguides.....	56
4.3.2 Carrier Removal by Proton Bombardment.....	57
4.4 Epitaxial Growth.....	58
4.4.1 Basic Properties of Epitaxially Grown Waveguides.....	59
4.4.2 Ga _{1-x} Al _x As Epitaxially Grown Waveguides.....	59
4.4.3 Epitaxial Waveguides in Other III-V and II-VI and IV Materials.....	63
4.4.4 Molecular Beam Epitaxy.....	64
4.4.5 Metal-Organic Chemical Vapor Deposition.....	65
4.5 Electro-Optic Waveguides.....	65
4.6 Oxidation.....	67
4.7 Methods for Fabricating Channel Waveguides.....	68
4.7.1 Ridged Waveguides Formed by Etching.....	68
4.7.2 Strip-Loaded Waveguides.....	69
4.7.3 Masked Ion Implantation or Diffusion.....	70
Problems.....	71
5. Polymer and Fiber Integrated Optics	73
5.1 Types of Polymers.....	73
5.2 Polymer Processing.....	75
5.2.1 Processing of Polystyrene.....	75
5.2.2 Processing of Polyimide.....	77
5.2.3 Post-Deposition Processing.....	77
5.3 Applications of Polymer Waveguide Interconnections.....	78
5.4 Polymer Waveguide Devices.....	80
5.4.1 Passive Polymer Devices.....	81
5.4.2 Active Polymer Devices.....	84
5.5 Optical Fiber Waveguide Devices.....	86
Problems.....	90

6. Losses in Optical Waveguides	93
6.1 Scattering Losses	93
6.1.1 Surface Scattering Loss	94
6.2 Absorption Losses	96
6.2.1 Interband Absorption	96
6.2.2 Free Carrier Absorption	98
6.3 Radiation Losses	102
6.3.1 Radiation Loss from Planar and Straight Channel Waveguides	102
6.3.2 Radiation Loss from Curved Channel Waveguides	102
6.4 Measurement of Waveguide Losses	106
6.4.1 End-Fire Coupling to Waveguides of Different Length	106
6.4.2 Prism-Coupled Loss Measurements	107
6.4.3 Scattering Loss Measurements	108
Problems	110
7. Waveguide Input and Output Couplers	113
7.1 Fundamentals of Optical Coupling	113
7.2 Transverse Couplers	114
7.2.1 Direct Focusing	114
7.2.2 End-Butt Coupling	115
7.3 Prism Couplers	119
7.4 Grating Couplers	122
7.4.1 Basic Theory of the Grating Coupler	123
7.4.2 Grating Fabrication	124
7.5 Tapered Couplers	126
7.6 Tapered Mode Size Converters	127
7.7 Fiber to Waveguide Couplers	128
7.7.1 Butt Coupling	128
7.7.2 High Density Multifiber Connectors	131
Problems	132
8. Coupling Between Waveguides	135
8.1 Multilayer Planar Waveguide Couplers	135
8.2 Dual-Channel Directional Couplers	136
8.2.1 Operating Characteristics of the Dual-Channel Coupler	136
8.2.2 Coupled-Mode Theory of Synchronous Coupling	138
8.2.3 Methods of Fabricating Dual-Channel Directional Couplers	142
8.2.4 Applications Involving Directional Couplers	145
8.3 Butt-Coupled Ridge Waveguides	146
8.4 Branching Waveguide Couplers	146
Problems	148

9. Electro-Optic Modulators	149
9.1 Basic Operating Characteristics of Switches and Modulators	149
9.1.1 Modulation Depth	149
9.1.2 Bandwidth	150
9.1.3 Insertion Loss	150
9.1.4 Power Consumption	151
9.1.5 Isolation	151
9.2 The Electro-Optic Effect	152
9.3 Single-Waveguide Electro-Optic Modulators	152
9.3.1 Phase Modulation	153
9.3.2 Polarization Modulation	154
9.3.3 Intensity Modulation	155
9.3.4 Electro-Absorption Modulation	155
9.4 Dual-Channel Waveguide Electro-Optic Modulators	158
9.4.1 Theory of Operation	159
9.4.2 Operating Characteristics of Dual-Channel Modulators ...	160
9.5 Mach-Zehnder Type Electro-Optic Modulators	164
9.6 Electro-Optic Modulators Employing Reflection or Diffraction ...	165
9.6.1 Bragg-Effect Electro-Optic Modulators	165
9.6.2 Electro-Optic Reflection Modulators	166
9.7 Comparison of Waveguide Modulators to Bulk Electro-Optic Modulators	168
9.8 Traveling Wave Electrode Configurations	170
Problems	172
 10. Acousto-Optic Modulators	 175
10.1 Fundamental Principles of the Acousto-Optic Effect	175
10.2 Raman-Nath-Type Modulators	177
10.3 Bragg-Type Modulators	178
10.4 Bragg-Type Beam Deflectors and Switches	181
10.5 Performance Characteristics of Acoustic-Optic Modulators and Beam Deflectors	184
10.6 Acousto-Optic Frequency Shifters	187
Problems	190
 11. Basic Principles of Light Emission in Semiconductors	 193
11.1 A Microscopic Model for Light Generation and Absorption in a Crystalline Solid	193
11.1.1 Basic Definitions	193
11.1.2 Conservation of Energy and Momentum	195
11.2 Light Emission in Semiconductors	198
11.2.1 Spontaneous Emission	198
11.2.2 Stimulated Emission	203
11.3 Lasing	206
11.3.1 Semiconductor Laser Structures	206

11.3.2	Lasing Threshold	207
11.3.3	Efficiency of Light Emission	209
	Problems	209
12.	Semiconductor Lasers	211
12.1	The Laser Diode	211
12.1.1	Basic Structure	211
12.1.2	Optical Modes	212
12.1.3	Lasing Threshold Conditions	213
12.1.4	Output Power and Efficiency	217
12.2	The Tunnel-Injection Laser	219
12.2.1	Basic Structure	219
12.2.2	Lasing Threshold Conditions	221
12.3	Polymer Lasers	222
	Problems	223
13.	Optical Amplifiers	225
13.1	Optical Fiber Amplifiers	225
13.1.1	Erbium Doped Fiber Amplifiers	225
13.1.2	Raman Optical Fiber Amplifiers	228
13.1.3	Other Optical Fiber Amplifiers	230
13.2	Non-Fiber Ion-Doped Optical Amplifiers	231
13.3	Semiconductor Optical Amplifiers	231
13.3.1	Integrated Semiconductor Optical Amplifiers	233
13.4	Comparison of Ion-Doped Fiber Amplifiers with SOAs	235
13.4.1	Wavelength Range	235
13.4.2	Performance Characteristics	235
13.5	Gain Equalization	236
13.6	Fiber Lasers	237
	Problems	239
14.	Heterostructure, Confined-Field Lasers	241
14.1	Basic Heterojunction Laser Structures	242
14.1.1	Single Heterojunction (SH) Lasers	242
14.1.2	Double Heterostructure (DH) Lasers	243
14.2	Performance Characteristics of the Heterojunction Laser	244
14.2.1	Optical Field Confinement	244
14.2.2	Carrier Confinement	247
14.2.3	Comparison of Laser Emission Characteristics	248
14.3	Control of Emitted Wavelength	249
14.3.1	$\text{Ga}_{(1-x)}\text{Al}_x\text{As}$ Lasers for Fiber-Optic Applications	249
14.3.2	Lasers Made of Quaternary Materials	251
14.3.3	Long-Wavelength Lasers	251
14.4	Advanced Heterojunction Laser Structures	251
14.4.1	Stripe Geometry Lasers	251

14.4.2	Single-Mode Lasers	253
14.4.3	Integrated Laser Structures	254
14.5	Reliability.	258
14.5.1	Catastrophic Failure.	259
14.5.2	Gradual Degradation	259
14.6	Vertical Cavity Lasers	259
	Problems	261
15.	Distributed-Feedback Lasers	263
15.1	Theoretical Considerations	263
15.1.1	Wavelength Dependence of Bragg Reflections	263
15.1.2	Coupling Efficiency	265
15.1.3	Lasing with Distributed Feedback.	268
15.2	Fabrication Techniques	269
15.2.1	Effects of Lattice Damage	269
15.2.2	Grating Location	270
15.2.3	DBR Lasers	272
15.3	Performance Characteristics	275
15.3.1	Wavelength Selectability	275
15.3.2	Optical Emission Linewidth	276
15.3.3	Stability	277
15.3.4	Threshold Current Density and Output Power	278
15.4	Semiconductor Air Bragg Reflector Lasers	279
	Problems	280
16.	Direct Modulation of Semiconductor Lasers	281
16.1	Basic Principles of Direct Modulation.	281
16.1.1	Amplitude Modulation.	281
16.1.2	Pulse Modulation.	284
16.1.3	Frequency Modulation.	286
16.2	Microwave Frequency Modulation of Laser Diodes	287
16.2.1	Summary of Early Experimental Results	287
16.2.2	Factors Limiting Modulation Frequency	288
16.2.3	Design of Laser Diode Packages for Microwave Modulation	292
16.3	Monolithically Integrated Direct Modulators	293
16.4	Amplified Laser Modulation	295
16.5	Future Prospects for Microwave Modulation of Laser Diodes	296
	Problems	296
17.	Integrated Optical Detectors	299
17.1	Depletion Layer Photodiodes.	299
17.1.1	Conventional Discrete Photodiodes.	299
17.1.2	Waveguide Photodiodes.	302
17.1.3	Effects of Scattering and Free-Carrier Absorption	303

17.2	Specialized Photodiode Structures	304
17.2.1	Schottky-Barrier Photodiode	304
17.2.2	Avalanche Photodiodes	305
17.2.3	p-i-n Photodiodes	307
17.2.4	Metal-Semiconductor-Metal Photodiodes	307
17.3	Techniques for Modifying Spectral Response	308
17.3.1	Hybrid Structures	309
17.3.2	Heteroepitaxial Growth	310
17.3.3	Proton Bombardment	313
17.3.4	Electro-Absorption	316
17.4	Factors Limiting Performance of Integrated Detectors	319
17.4.1	High Frequency Cutoff	319
17.4.2	Linearity	320
17.4.3	Noise	320
	Problems	320
18.	Quantum-Well Devices	325
18.1	Quantum Wells and Superlattices	325
18.2	Quantum-Well Lasers	327
18.2.1	Single-Quantum-Well Lasers	327
18.2.2	Multiple Quantum Well Lasers	330
18.3	Quantum-Well Modulators and Switches	334
18.3.1	Electro-Absorption Modulators	334
18.3.2	Electro-Optic Effect in Quantum Wells	338
18.3.3	Multiple Quantum Well Switches	339
18.4	Quantum-Well Detectors	341
18.4.1	Photoconductive Detectors	341
18.4.2	MQW Avalanche Photodiodes	342
18.5	Self-Electro-Optic Effect Devices	343
18.6	Quantum-Well Devices in OEIC's	344
18.6.1	Integrated Laser/Modulators	344
18.6.2	A Four-Channel Transmitter Array with MQW Lasers	346
	Problems	347
19.	Micro-Optical-Electro-Mechanical Devices	349
19.1	Basic Equations of Mechanics	349
19.1.1	Axial Stress and Strain	350
19.1.2	Thin Membranes	351
19.1.3	Cantilever Beams	352
19.1.4	Torsion Plates	353
19.2	Thin Membrane Devices	354
19.3	Cantilever Beam Devices	356
19.4	Torsional Devices	359
19.5	Optical Elements	362
19.6	Future Directions in MOEMS Development	364

19.7 Mechanical Properties of Silicon	365
Problems	365
20. Applications of Integrated Optics and Current Trends	367
20.1 Applications of Optical Integrated Circuits	367
20.1.1 RF Spectrum Analyzer	367
20.1.2 Monolithic Wavelength-Multiplexed Optical Source	370
20.1.3 Analog-to-Digital Converter (ADC)	371
20.1.4 Integrated-Optic Doppler Velocimeter	372
20.1.5 An IO Optical Disk Readhead	374
20.1.6 OIC Temperature Sensor	376
20.1.7 IO High Voltage Sensor	377
20.1.8 IO Wavelength Meters and Spectrum Analyzers	378
20.1.9 IO Chemical Sensors	379
20.2 Opto-Electronic Integrated Circuits	379
20.2.1 An OEIC Transmitter	381
20.2.2 An OEIC Receiver	381
20.2.3 An OEIC Phased-Array Antenna Driver	382
20.3 Devices and Systems for Telecommunications	383
20.3.1 Trends in Optical Telecommunications	383
20.3.2 New Devices for Telecommunications	387
Problems	391
21. Photonic and Microwave Wireless Systems	393
21.1 Merging of Photonics and Microwave Technology	393
21.2 Fiber-Optic Transmission of RF and Microwave Signals	395
21.2.1 Basic Principles	396
21.2.2 Device Performance	398
21.2.3 System Performance	399
21.3 Microwave Carrier Generation by Optical Techniques	401
21.4 Future Projections	405
Problems	406
References	407
Subject Index	441
