Preface

This workshop addresses the design and realization of anonymity services for the Internet and other communication networks. The main topics of the workshop are

- Attacks on Systems,
- Anonymous Publishing,
- Mix Systems,
- Identity Management, and
- Pseudonyms and Remailers.

Anonymity and unobservability have become "hot topics" on the Internet. Services that provide anonymous and unobservable access to the Internet are useful for electronic commerce applications (obviously with the need for strong authenticity and integrity of data) as well as for services where the user wants to remain anonymous (e.g. web-based advisory services or consultancy).

I would like to thank the other members of the program committee John Borking, Marit Köhntopp, Andreas Pfitzmann, Avi Rubin, Adam Shostack, Michael Waidner, and Sonja Zwissler for their helpful hints, for doing the reviews, and for their patience. A special thanks is dedicated to Lila Finhill of ICSI for her help in all administrative and financial concerns, and Christian Schindelhauer for his support on LaTeX.

July 2000   Hannes Federrath

Organization

This workshop was held at the International Computer Science Institute (ICSI), Berkeley, California, July 25-26, 2000.

Program Committee

John Borking	Registratiekamer Netherlands
Hannes Federrath	ICSI, Berkeley
Marit Köhntopp	Privacy Commissioner Schleswig-Holstein, Germany
Andreas Pfitzmann	Dresden University of Technology, Germany
Avi Rubin	AT&T Research
Adam Shostack	Zero-Knowledge Systems, Montreal, Canada
Michael Waidner	IBM Zurich Research Lab
Sonja Zwissler	ICSI, Berkeley

Sponsoring Institutions

International Computer Science Institute, Berkeley, USA
Zero-Knowledge Systems, Montreal, Canada
