

Contents

Mathematical Symbols and Constants	1
Notations and symbols	1
Mathematical constants	2
Sets and Propositions	3
Notion of a set	3
Relations between sets	3
Operations with sets	4
Rules for operations with sets	5
Product sets and mappings	6
Propositional calculus	7
Number Systems and their Arithmetic	9
Natural, integer, rational, and real numbers	9
Calculation with real numbers	10
Absolute values	11
Factorial and binomial coefficients	12
Equations	13
Inequalities	14
Finite sums	15
Powers and roots	15
Logarithms	16
Complex numbers	17
Combinatorial Analysis	19
Permutations	19
Arrangements	19
Combinations	20
Sequences and Series	21
Sequences of numbers	21
Sequences of functions	22
Infinite series	23
Function and power series	25
Taylor series	27
Fourier series	29

Mathematics of Finance	31
Simple interest	31
Compound interest	33
Annuities	36
Dynamic annuities	38
Amortization calculus	39
Price calculus	41
Investment analysis	42
Depreciations	43
Numerical methods for the determination of zeros	44
Functions of one Independent Variable	45
Basic notions	45
Linear functions	47
Quadratic functions	47
Polynomials	48
Fractional rational functions, partial fraction decomposition	49
Exponential functions	50
Logarithmic functions	51
Trigonometric functions	52
Inverse trigonometric functions	54
Hyperbolic functions	55
Area-hyperbolic functions	55
Some economic functions	56
Differential Calculus for Functions of one Variable	59
Limit of a function	59
Continuity	60
Differentiation	61
Economic interpretation of the first derivative	64
Rates of change and elasticities	66
Mean value theorems	68
Higher derivatives and Taylor expansion	68
Description of function features by means of derivatives	70
Investigation of economic functions, profit maximization	73
Integral Calculus for Functions of one Variable	77
Indefinite integral	77
Definite integral	78
Tables of indefinite integrals	79
Improper integrals	86
Parameter integrals	86
Economic applications of integral calculus	87

Differential Equations	89
First-order differential equations	89
Linear differential equations of n -th order	90
First-order linear systems with constant coefficients	93
Difference Equations	95
First-order linear difference equations	95
Economic models	96
Linear second-order difference equations	97
Economic models	99
Linear difference equations of n -th order with constant coefficients	100
Differential Calculus for Functions of Several Variables	101
Basic notions	101
Point sets of the space \mathbb{R}^n	101
Limit and continuity	102
Differentiation of functions of several variables	103
Total differential	106
Unconstrained extreme value problems	107
Constrained extreme value problems	108
Least squares method	110
Propagation of errors	111
Economic applications	112
Linear Algebra	113
Vectors	113
Equations of straight lines and planes	115
Matrices	117
Determinants	119
Systems of linear equations	120
Gaussian elimination	121
Cramer's rule	123
Exchange method	123
Inverse matrix	124
Eigenvalue problems for matrices	124
Matrix models	125
Linear Programming and Transportation Problem	127
Normal form of a linear programming problem	127
Simplex method	128
Dual simplex method	130
Generation of an initial simplex table	131
Duality	133
Transportation problem	134

Descriptive Statistics	137
Basic notions	137
Univariate data analysis	137
Statistical parameters	138
Bivariate data analysis	139
Ratios	142
Inventory analysis	143
Time series analysis	145
Calculus of Probability	147
Random events and their probabilities	147
Conditional probabilities	149
Random variables and their distributions	151
Discrete distributions	151
Continuous distributions	153
Special continuous distributions	154
Random vectors	157
Inductive Statistics	161
Sample	161
Point estimates	161
Confidence interval estimates	163
Statistical tests	165
Significance tests under normal distribution	166
Tables	168
References	179
Index	181
