

Acknowledgments

This book is an extended version of my PhD thesis from Lund Institute of Technology, which was written in the spring of 1999. My thesis advisors were Anders Rantzer and Karl-Erik Årzén and significant parts of this book is based on joint work with them. In addition, Andrey Ghulchak and Karl Johan Åström had a strong influence on the organization and content of the thesis. Its a pleasure and honor to acknowledge their contributions.

I am also grateful to Anders Rantzer for suggesting me to transform the thesis into this book, to Stephen Boyd for enthusiastically encouraging me to do so, and to Laurent El Ghaoui for keenly supporting this project and providing the funding that made it happen.

Several people have read and commented parts of this manuscript. In particular, Karl-Henrik Johansson, Haitham Hindi and Lin Xiao provided many constructive comments on a late draft that greatly enhanced the quality of this book. All the remaining errors are now, I fear, my own.
