Preface	xi
I Review of Calculus	1
An Outline of a Traditional Course in Calculus	1
Calculus Review Problems	6
II Analysis Problems	19
Introduction	19
Section 1. Basic Problems	
Problem 1. Properties of Even and Odd Functions	19
Problem 2. Use of the Cancellation Principle	22
Problem 3. Finding Maclaurin Series Representations	26
Problem 4. Evaluating $\int_0^1 x^k dx$ by Cavalieri Sums	29
Section 2. Supplementary Problems	
Problem 5. The Pervasive Nature of Sequences	31
Problem 6. Counterexamples	36
Problem 7. Some Examples of Unusual Functions	37
Problem 8. Identifying Interior, Exterior, Boundary, and Limit Points	39
Problem 9. Exploring Uniform Continuity	40
Problem 10. Comparing the Ratio Test, the Root Test, and Raabe's Test	42
Problem 11. Various Proofs that $\sum_{n=1}^{\infty} \frac{1}{n^2} = \frac{\pi^2}{6}$	47

vii

Problem 12. Finding a Value for $\sum_{n=1}^{\infty} \frac{1}{n^3}$	51
Problem 13. Rearrangements of Conditionally Convergent Series	52
Problem 14. Finding Approximations for π	61
Problem 15. A Function with Derivatives of All Orders, but No Maclaurin Series	68
Problem 16. Evaluating $\int_0^1 x^k dx$ by Fermat's Method	69
Problem 17. Two Proofs that $\int_0^1 (x \ln x)^n dx = (-1)^n n! / (n + 1)^{(n+1)}$	70
Problem 18. Evaluating $\int_0^1 x^x dx$ by Bernoulli's Method	72
Problem 19. Some Interesting Sequences of Functions	73
Problem 20. Comparing Uniform Continuity and Uniform Convergence	74
Problem 21. Questions for Sequences of Functions and for Series of Functions	75
Section 3. Enrichment Problems	
Problem 22. Generalizing the Fibonacci Sequence	79
Problem 23. Euler's Proof that e Is Irrational	81
Problem 24. Subseries of the Harmonic Series	83
Problem 25. Finding Functions whose Maclaurin Series is $\sum_{n=1}^{\infty} n^k x^n$	87
Problem 26. A Pascal-like Triangle	91
Problem 27. Finding Areas without Antiderivatives	95
Problem 28. Questions from the Euler–Stirling Correspondence	100
Problem 29. The Gamma Function	102
Problem 30. Bernoulli Numbers	109
Problem 31. A Look at Fourier Series	112
Problem 32. Summability of Divergent Series	115
Problem 33. Lebesgue Measure	121
Problem 34. Cantor's Middle Third Set	123
III Essays	125
Section 1. History and Biography	
Essay 1. The Time of Archimedes and Other Giants (pre-1660)	126
Essay 2. The Time of Newton and Leibniz (1660–1690)	129
Essay 3. The Time of Euler and the Bernoullis (1690–1790)	132
Essay 4. The Time of Cauchy, Fourier, and Lagrange (1790–1850)	135
Essay 5. The Time of Riemann and Weierstrass (1850–1900)	139
Essay 6. The Time of Lebesgue and Hardy (1900–1940)	142
Section 2. New Looks at Calculus Content	
Essay 7. Obtaining the Derivative Formulas	147
Essay 8. Tests for Convergence of Series	155
Section 3. General Topics for Analysis	
Essay 9. Proof Techniques in Analysis	163
Essay 10. Sets and Topology	170

Part . Contents	ix
IV Selected Readings	175
Introduction	175
Selection 1. John Bernoulli and the Marquis de l'Hôpital	177
Selection 2. The Euler–Stirling Correspondence	179
Selection 3. Developing Rigor in Calculus	187
Selection 4. The Contribution of Lebesgue	198
Selection 5. The Bernoulli Numbers and Some Wonderful Discoveries of Euler	202
Annotated Bibliography	207
Additional References	217
Index	221
