Contents

1 Introduction 9

2 Analysis of Contingency Tables 11

2.1 Two-way Tables 11
2.1.1 Survey Methods in Two-way Tables 12
2.1.2 Hypotheses and Testing in Two-way Tables 15
2.2 Odds Ratios 17

3 Hierarchical Log-linear Models 23

3.1 The Derivation of the Log-linear Model 23
3.2 Interpretation of Single Parameters in Log-linear Models 25
3.2.1 Saturated Model and Restrictions 25
3.2.2 Interpretation of the Parameters 27
3.2.3 Estimation of the Parameters 30
3.3 Interpreting Hierarchical Log-Linear Models 30
3.3.1 Hierarchy principle 30
3.3.2 Interpretation of Reduced Models 33
3.4 Testing and Model Selection 37
3.4.1 Testing for Goodness of Fit 37
3.4.2 Model Selection Criteria 39
3.4.3 Testing Single Parameters 41
3.5 Concluding Example and Further Tasks 42
3.5.1 Example for Model Testing 42
3.5.2 Further Tasks in Log-Linear Modeling 46

4 Generalized Linear Models 49

4.1 Introduction and Definitions 49
4.2 General Linear Models 51
4.2.1 Definition of the General Linear Model 51
4.2.2 The Multiple Regression Model 52
4.2.3 The Analysis of Variance 53

5 Log-Linear Models in the Context of GLM 55

5.1 Coding Strategies for Design Matrices 55
5.1.1 Dummy Coding 56
5.1.2 Unweighted Effect Coding 58
5.1.3 Weighted Effect Coding 59
5.1.4 Orthogonal Coding 59
5.1.5 Nonsense Coding 61
5.1.6 A Computation Procedure for Design Matrices 61
5.2 Issues of Orthogonality in Design Matrices 62

5.2.1 Multicollinearity in Regression Models 62
5.2.2 Orthogonal vs. Nonorthogonal Design Vectors 63
5.2.3 The Phenomenon of Block Orthogonality 65
5.2.4 Further Aspects of Correlation between Design Vectors 67
5.3 GLM Implementation of Log-Linear Models 69
5.3.1 The Basic GLM Structure of the Log-Linear Representation 69
5.3.2 Design Matrix Strategies for Log-Linear Modeling 70
5.4 Justification of a New Approach for Parameter Contribution – Part 1 .. 73

6 Nonstandard Log-Linear Models 75

6.1 Limitations of Nonhierarchical Log-Linear Models 75
6.1.1 Definition of Nonhierarchical Models 75
6.1.2 Discussions about the Legitimation of Nonhierarchical Models 76
6.2 Nonstandard Models as GLM 78
6.2.1 Some Introductory Definitions 78
6.2.2 The Usefulness of Nonstandard Models 80
6.3 Theoretical Funding vs. Data-Driven Approach for Parameter Interpretation 83
6.4 Justification of a New Approach for Parameter Contribution – Part 2 .. 84

7 Stepwise Approaches for Model Selection 85

7.1 Ordinary Stepwise Regression 85
7.1.1 Criteria for Model Selection Based on Sum of Squares Decomposition 85
7.1.2 Stepwise Regression, Forward and Backward Elimination 87
7.2 Stepwise Procedures for Log-Linear Model Selection 88
7.2.1 Stepwise Selection for a Given Model Hierarchy 89
7.2.2 Screening Effects Procedure 90
7.2.3 Goodman’s Stepwise Procedure 91
7.2.4 Model Selection According to Edwards & Havrànek 92
7.3 Justification of a New Approach for Parameter Contribution – Part 3 .. 93

8 A Procedure for Analyzing Standard and Nonstandard Models 95

8.1 Entering of the Model Effects 96
8.1.1 Correlation between Design Vectors and Dependent Variables in Ordinary Regression 96
8.1.2 Coefficients of Partial Correlation and Determination in Ordinary Regression 98
8.1.3 Implications of Correlation Analysis in Log-Linear Models 99
8.1.4 Implications of Partial Correlations in Log-Linear Models 102
8.2 Adopting Goodman’s Forward Selection 104
8.3 Relative Importance of Single Parameters 105
8.3.1 Relative Importance by Averaging Orderings 105
8.3.2 An Approach Based on Information Theory 106

8.3.3 The Dominance Analysis 107
8.4 Some Pseudo-R^2 Measures 110
8.4.1 The Standard Approach for Pseudo-R^2 in Log-Linear Models 110
8.4.2 Further Proposals of Pseudo-R^2 Measures 111
8.5 Concluding Example 112

9 Testing Non-Nested Models 115

9.1 General Remarks for Model Testing 115
9.2 A Likelihood Ratio Test for Non-Nested Models 116
9.2.1 General Definitions and Assumptions 116
9.2.2 Implications for Non-Nested and Overlapping Models 119
9.3 Comparing Two AIC's 121
9.3.1 Introductory Topics 121
9.3.2 The Use of AIC in Log-Linear Models 122
9.3.3 A Test whether Two AIC's Differ Significantly 123

10 Algorithmic Implementation 127

10.1 General Annotation 127
10.2 Components of the New Procedure 127
10.2.1 Input and Output 127
10.2.2 Determining the Routine 129

11 Examples 133

11.1 Standard Log-Linear Model 133
11.2 Nonstandard Model with Special Coding Vector 139
11.3 Example for Linhart's Test Procedure 142
11.4 The Weak Wedge 145

12 Summary 149

13 Discussion 151
