Sergei Sazhin
Frontmatter
[More information](#)

The book provides an extensive theoretical treatment of whistler-mode propagation, instabilities and damping in a collisionless plasma. This book fills a gap between oversimplified analytical studies of these waves, based on the cold plasma approximation, and studies based on numerical methods. Although the book is primarily addressed to space plasma physicists and radio physicists, it will also prove useful to laboratory plasma physicists. Mathematical methods described in the book can be applied in a straightforward way to the analysis of other types of plasma wave. Problems included in this book, along with their solutions, allow it to be used as a textbook for postgraduate students.

Whistler-mode waves in a hot plasma

Cambridge atmospheric and space science series

Editors

Alexander J. Dessler
John T. Houghton
Michael J. Rycroft

Titles in print in this series

M. H. Rees, *Physics and chemistry of the upper atmosphere*
Roger Daley, *Atmospheric data analysis*
Ya. L. Al'pert, *Space plasma, Volumes 1 and 2*
J. R. Garratt, *The atmospheric boundary layer*
J. K. Hargreaves, *The solar-terrestrial environment*
Sergei Sazhin, *Whistler-mode waves in a hot plasma*

Contents

<i>Acknowledgements</i>	<i>page</i> ix
<i>Introduction</i>	1
1 Basic equations	5
1.1 Approximations	5
1.2 Development of an initial perturbation	6
1.3 The dispersion equation	13
1.4 The plasma dielectric tensor (general expression)	15
1.5 The plasma dielectric tensor (weakly relativistic approximation)	20
1.6 The plasma dielectric tensor (non-relativistic approximation)	23
1.7 The plasma dielectric tensor (special cases)	27
1.8 The plasma dielectric tensor (effect of electron beams)	29
1.9 The plasma dielectric tensor (cold plasma approximation)	32
1.10 Wave polarization	33
2 Propagation in a cold plasma	36
2.1 The Appleton–Hartree equation	36
2.2 Whistler-mode group velocity	42
2.3 Whistler-mode polarization	51
2.4 A physical model of wave propagation	57
3 Parallel propagation (weakly relativistic approximation)	61
3.1 Simplification of the general dispersion equation	61
3.2 Low-temperature limit	65
3.3 Physical interpretation	69
4 Parallel propagation (non-relativistic approximation)	76
4.1 Analytical solutions	76
4.2 A graphical solution	85
4.3 Group velocity	87

5	Quasi-longitudinal approximation	94
5.1	Almost parallel propagation (low-temperature limit)	94
5.2	Propagation at a finite θ (low-temperature limit)	101
5.3	Special cases of quasi-longitudinal propagation	110
5.4	Wave polarization	114
5.5	Propagation in the presence of electron beams	115
6	Quasi-electrostatic approximation	121
6.1	The dispersion equation in a low-temperature limit	121
6.2	The quasi-electrostatic solution for $a_1^t \neq 0$	125
6.3	The quasi-electrostatic solution for $a_1^t = 0$	131
6.4	An improved quasi-electrostatic approximation	133
6.5	The quasi-electrostatic solution for $\xi_1 = -0.924$	136
6.6	Wave polarization	137
6.7	Propagation in the presence of electron beams	140
7	Growth and damping of the waves	144
7.1	Parallel propagation (weakly relativistic approximation)	144
7.2	Parallel propagation (non-relativistic approximation)	154
7.3	Quasi-longitudinal propagation	161
7.4	Quasi-electrostatic propagation	170
7.5	A physical model	174
8	Non-linear effects	185
8.1	Quasi-linear theory	185
8.2	Monochromatic waves	201
9	Applications to the Earth's magnetosphere	210
9.1	Whistler diagnostics of magnetospheric parameters	210
9.2	Whistler-mode emissions in the vicinity of the magnetopause	224
9.3	Mid-latitude hiss-type emissions	231
	<i>References</i>	236
	<i>Solutions to the problems</i>	250
	<i>Index</i>	258

Acknowledgements

The idea of writing this monograph was first suggested by Prof. M. J. Rycroft, editor of the series. I deeply appreciate his encouragement, support, and useful suggestions about the draft version of the manuscript.

The work has been completed in the University of Sheffield, where I was invited by Prof. T. R. Kaiser and Dr K. Bullough and arrived in April 1988. I am grateful to both of them for this invitation and their continuous support. Dr Bullough was the first to read the whole manuscript and to comment on it both from the point of view of physics and as regards the quality of the English language.

Historically this book resulted from the extensive development of Chapter 1 of a projected more comprehensive book ‘Whistler-mode waves in the magnetosphere’, on which I began work in 1983 together with Dr H. J. Strangeways. I am indebted to him for his cooperation, which strongly stimulated many ideas developed in my book, although our major common project has never been completed.

I wish to thank Prof. R. J. Moffett, Dr N. M. Temme, Mr L. J. C. Wooliscroft, Prof. O. A. Pokhotelov, Dr D. R. Shklyar, Dr D. Nunn, Dr A. E. Sumner and Mr R. Body for their very useful comments on selected chapters of the manuscript. My special thanks are to Mr M. Behrend, the text editor, for his careful reading of the manuscript and important comments which helped to improve considerably the presentation of the book.

I would like to thank all my colleagues in the Department of Physics of the University of Sheffield for providing me with varied assistance throughout the whole period of the work on this monograph.

It is not possible to enumerate all my personal friends in Sheffield and other parts of the United Kingdom who helped me and my family to find new roots in England. Without this the whole idea of writing the book would never have materialized.
