

## ACKNOWLEDGEMENTS

In the Dutch PhD tradition, it is customary to present a list of propositions along with the actual dissertation. One of the propositions of my own thesis was: “Gaining time by hurrying is a waste of time.” I did not mean that hurrying often has a contrary effect, as in the proverb ‘more haste, less speed’, but that hurrying *in itself* is a waste of time, because one cannot hurry and live at the same time. Hurrying entails a narrowing of the mind, but unlike concentration, it involves losing awareness of what one is actually doing. Although awareness is a *sine qua non* for science, even present day scientists are sometimes the victims of a lack of time, and feel forced to produce their results within strict deadlines. This is a pity for both science and the scientist. I am very grateful for the opportunity that I have had to write this book without such time pressure. Whether this has resulted in a good book, I leave to the judgement of the reader. But it certainly has made this book part of my life.

I would like to thank the Department of the History of Science and Technology at the University of Twente and its members during my days there: Floris Cohen, the late Casper Hakfoort, Marius Engelbrecht, Paul Lauxtermann, Hans Sparnaay, Tomas Vanheste and Péter Várdy, for their constructive comments on parts of the text. The ideas underlying this book came into being amidst this fine and stimulating group of scholars of varying backgrounds.

I am especially grateful to my supervisor during my PhD and friend afterwards, Floris Cohen, without whom the English version would never have appeared. Throughout the process of translation and publication Floris has stimulated me not to lose sight of reality, and to make the book come true. Floris, I thank you greatly for all this and much more.

Without doubt my second supervisor, the late Casper Hakfoort, would have rejoiced over the publication as well. I recall his enthusiasm and sympathy with gratitude, and am happy to be able to dedicate this book to his memory.

Moreover I would like to thank Frans van Lunteren, Louk Fleischhacker, and Peter Kluit for discussions concerning parts of this book. Henri, my brother, I thank you for your assistance in the back-breaking work of creating an index.

The employees of the Archive of the Academy of the Berlin-Brandenburg Academy of Sciences and Humanities gave me a warm welcome and help during my

visit in November 1988 (when nobody expected the forthcoming changes, and the institution was still called the Academy of Sciences of the German Democratic Republic.) I also thank the Archive of the Academy for permitting me to quote from the prize essays that are preserved there. Thanks too, to the librarians of the University of Twente for their kindness in dealing with the large numbers of requests for literature from outside the university.

I would like to thank Kluwer Academic Publishers for giving me a hearing when I presented myself with one chapter, some hope, and as yet no great standing in the field. Special thanks are owing to Mrs. Annie Kuipers, Mrs. Stephanie Harmon, and Mrs. Jolanda Voogd.

An excellent translator has been found in the person of Sen McGlinn. He has done a wonderful job. His ability to understand the text, and his willingness to think along with me and make suggestions for improvements often astonished me. I thank him sincerely.

The translation was made possible financially by a generous grant from the Netherlands Organisation for Scientific Research (NWO). I would like to thank especially Mrs. F. Grootoink of NWO for her patience and her kind help in dealing with all the necessary administrative tasks.

Sander, my last and warmest thanks go to you, who never stops showing me how to seize the day.

*Wageningen, the Netherlands*
