Cambridge Tracts in Theoretical Computer Science

Managing Editor Professor C.J. van Rijsbergen, Department of Computing Science,
University of Glasgow

Editorial Board

S. Abramsky, Department of Computing Science, Imperial College of Science and Technology
P.H. Aczel, Department of Computer Science, University of Manchester
J.W. de Bakker, Centrum voor Wiskunde en Informatica, Amsterdam
J.A. Goguen, Programming Research Group, University of Oxford
J.V. Tucker, Department of Mathematics and Computer Science, University College of Swansea

Titles in the series

1. G. Chaitin *Algorithmic Information Theory*
2. L.C. Paulson *Logic and Computation*
3. M. Spivey *Understanding Z*
4. G. Revesz *Lambda Calculus, Combinators and Logic Programming*
5. S. Vickers *Topology via Logic*
6. A. Ramsay *Formal Methods in Artificial Intelligence*
7. J-Y. Girard, Y. Lafont & P. Taylor *Proofs and Types*
8. J. Clifford *Formal Semantics & Pragmatics for Natural Language Processing*

CONTENTS

Acknowledgments	page ix
1 Introduction	1
1.1 The context	1
1.2 Overview	8
2 Classes of update semantics	10
2.1 Formula-based and model-based semantics	12
2.2 Permissive and restrictive semantics	20
2.3 Embellishments	30
2.4 Evaluating semantics for a particular application	31
3 Model-based semantics for updates	46
3.1 Preliminaries	47
3.2 Relational theories	49
3.3 A syntax for updates	53
3.4 The standard semantics	54
3.5 Update equivalence under the standard semantics	57
3.6 The minimal-change semantics	60
3.7 Handling equality	63
4 Update algorithms for model-based semantics	64
4.1 Simple updates	65
4.2 Selection clauses	67
4.3 Nulls	69
4.4 The closed-world assumption	71
4.5 Summary	73
4.6 Computational complexity of the Update Algorithm	75
4.7 An update algorithm for the minimal-change semantics	77

5	Updates with variables	84
5.1	Semantics of updates containing variables	85
5.2	An update algorithm: no variables in body	86
5.3	An update algorithm: variables in body	91
6	Lazy evaluation of updates	97
6.1	Overview and motivation	98
6.2	Queries	100
6.3	Cost estimation	102
6.4	The lazy graph	104
6.5	Adding updates and queries to the lazy graph	106
6.6	The Lazy Algorithm	111
6.7	Update splitting	116
6.8	Assertions	133
6.9	Costs and benefits of the Lazy Algorithm	134
7	Integrity constraints	141
7.1	Introduction	142
7.2	Preventing model rescues	144
7.3	Unsafe dependencies	151
7.4	Extensions	154
7.5	Computational complexity	155
7.6	Related work	156
8	Adding knowledge to relational theories	159
8.1	An example action scenario	162
8.2	Definition of the possible models approach	164
8.3	The frame problem	165
8.4	The ramification problem	170
8.5	Multiple extensions	173
8.6	Problems with the possible models approach	174
9	Implementation	178
9.1	Overview	179
9.2	Data structures and access techniques for relational theories	180
9.3	Implementation of the Update Algorithm	185
9.4	Simulation data	187
9.5	Updates and queries	188
9.6	Update implementation technique	190
9.7	Experimental results and discussion	191
	Bibliography	200
	Index of definitions	207

ACKNOWLEDGMENTS

This work has benefitted greatly from discussions with my mentors, colleagues, and students. I owe much to my dissertation committee: Gio Wiederhold, Moshe Vardi, and Christos Papadimitriou. My appreciation also goes to Tim Chou, Mukesh Dalal, Ken Forbus, Peter Gärdenfors, Matt Ginsberg, Haym Hirsh, Hirofumi Katsuno, Vladimir Lifschitz, Mike Mitchell, Karen Myers, Peter Rathmann, Ray Reiter, Ken Satoh, Alex Schäffer, Devika Subramanian, Allen Van Gelder, Jeff Ullman, and David Wilkins for their helpful insights, suggestions, advice, and comments. I also thank John Corbett for creating Figure 9.1.

Financial support for this endeavor came from an AT&T Bell Laboratories Doctoral Scholarship, an NSF Presidential Young Investigator Award, and from the Defense Advanced Research Projects Agency under contract N00039-84-C-0211 to Prof. Gio Wiederhold. I also owe much to the encouragement I received while working at Bell Laboratories, especially from Andy Salazar, Charles Roberts, and Bob Lucky.

Earlier versions of some of this material have appeared elsewhere; much of Chapters 1–7 and 9 was an outgrowth of my PhD thesis [Winslett 86c]. Chapters 2 and 3 are drawn in part from [Winslett 88a] and [Winslett 88b], respectively. Portions of Chapters 4 and 5 are derived from [Winslett 86b, 88b], and Chapter 8 is a refinement of [Winslett 88c].
