

The Life and Death of Smallpox

This is an engaging and fascinating story of a conditional human success story. Smallpox has been one of the most devastating scourges of humanity throughout recorded history, and it is the only human illness to have been eradicated, though polio may soon follow it to official extinction through human agency. However, while smallpox is officially extinct in nature, our fears that stocks of smallpox virus may return as a weapon of bioterrorists have led to the stockpiling of vaccine, and continuing vigilance, even though the official victory over smallpox is now 15 years old. *The Life and Death of Smallpox* presents the entire engaging history of our struggle and ultimate (?) victory over one of our oldest and worst enemies. The story of the campaign to track down and eradicate the virus, throughout the world – the difficulties, setbacks, and the challenges successfully met – is a highlight of a fascinating book, but we cannot be confident of the ending. The final chapter of the book clearly and authoritatively explains the current status of the threat from the deliberate release of smallpox or other potential agents of biological terrorism.

Ian Glynn is Professor Emeritus of Physiology at Cambridge University and Fellow of Trinity College. He is the author of *An Anatomy of Thought* (1999). Jenifer Glynn is a Cambridge historian and author of *Tidings From Zion* (2000).

in 1974. Reproduced by permission of the WHO, Geneva | 215 |
| 34. Rahima Banu, the last case of naturally occurring variola
major in the world. Reproduced by permission of the WHO,
Geneva | 219 |
| 35. Ali Maow Maalin, the last case of naturally occurring
smallpox in the world. Reproduced by permission of the
WHO, Geneva | 226 |
| 36. The official parchment certifying the global eradication of
smallpox, 9th December 1979. Reproduced by permission of
the WHO, Geneva. | 229 |

Acknowledgements

Writing the biography of a subject whose known life extended through three millenia and embraced five continents is a wide-ranging task, and we want to thank the many people whose help has made that task a pleasure. Graeme Mitchison, Douglas and Clare Fearon, Judith Glynn, Alan Glynn, Colin Franklin and Eckard Wimmer have read and criticised the entire text. Geoffrey Smith and Ian Ramshaw have given valuable advice on virology, Peter Lachmann on immunology, John Twigg on history. Seemingly endless questions have been answered by colleagues at Cambridge – Arnold Browne, Roger Dawe, John Easterling, Eric Handley, Simon Keynes, Sachiko Kusakawa, John Lonsdale, William St Clair, Peter Sarris. For errors that have survived this flood of advice, we accept responsibility.

The World Health Organization's massive 1988 publication *Smallpox and its Eradication* (by Frank Fenner, Donald A. Henderson, Isao Arita, Zdenek Jezek, and Ivan D. Ladnyi) has been a mine of information, and we are very grateful to the Organization for generous permission to reproduce many illustrations. Laura Cordy has been a wonderful help in preparing these and other illustrations for publication.

We would particularly like to thank the director of the Jenner Museum in Berkeley, Gloucestershire, and the librarians of the University Library, the Geography Library, the Medical Library, the Needham Institute, and Trinity College Library, in Cambridge, and of the Royal Society of Medicine in London.
