

Landolt-Börnstein
Group VI: Astronomy and Astrophysics

Volume 3
Astronomy and Astrophysics

Subvolume B
Stars and Star Clusters

	Introductory material	
4	The stars	1
4.1	Physical parameters of the stars (See Vol. 2B)	
4.2	Magnitudes and colors	1
4.2.0	General remarks	1
4.2.1	Data dissemination centers	1
4.2.2 - 4.2.4	See Vol. 2B	
4.2.5	Photoelectric photometry	2
4.3	Physics of stellar atmospheres	41
4.3.1	Radiative transfer	42
4.3.2	Line blanketing	44
4.3.3	Convective energy transport	46
4.3.4	Chromospheres and coronae	48
4.3.5	Stellar winds	55
4.3.6	Atomic and molecular data	57
4.3.7	Atmospheres of accretion disks	60
4.4	Stellar structure and evolution	62
4.4.1	Equations of stellar structure	62
4.4.2	Properties of stellar matter	64
4.4.3	Model computations	89
5	Special types of stars	127
5.1	Variable stars	127
5.1.0	Abbreviations and notations	127
5.1.1	Definitions and general remarks	128
5.1.2	Pulsating variables	132
5.1.3	Rotating variables	158
5.1.4	Supernovae and cataclysmic variables	162
5.1.5	Eruptive variables	183
5.2	Peculiar stars (See Vol. 2B)	
5.3	Protostars, pre-main sequence objects	196
5.4	Planetary nebulae	204
5.5	White dwarfs (WD)	219
5.6	Compact objects	223
5.6.1	Neutron stars (See Vol. 2C)	
5.6.2	Radiopulsars (See Vol. 2C)	
5.6.3	Pulsating X-ray sources	223
5.6.4	X-ray bursters	238
5.6.5	Black holes	251
5.7	X-ray and gamma-ray sources	257

6	Double stars and star clusters	263
6.1	Double stars	263
6.1.0	General remarks	263
6.1.1	Visual (wide) binaries	269
6.1.2	Close binaries	272
6.1.3	Systems with compact objects	282
6.2	Star clusters and associations	303
6.2.1	Galactic globular clusters	303
6.2.2	Galactic open clusters	309
6.2.3	Associations	311
6.2.4	Clusters in extragalactic systems	312
