Volume 4
Meteorology

Subvolume A
Thermodynamical and Dynamical Structures of the Global Atmosphere

	Title Page, Contributors, Preface, Errata	
1	Equations and principles of atmospheric large-scale dynamics (G. FISCHER)	1
1.1	The fundamental laws and their mathematical representation	2
1.2	Spherical coordinates	5
1.3	General horizontal coordinates	12
1.4	Generalized vertical coordinates	17
1.5	Energy and angular momentum budgets	27
1.6	Books on dynamical meteorology	34
1.7	List of symbols	35
2	Data for the basic structure of the atmosphere (F. HERBERT)	37
2.1	System of units, absolute constants and parameters	37
2.2	Elementary dynamical relations	45
2.3	Thermodynamic data for dry air and moist air	64
2.4	Vertical structure and statics of the atmosphere	109
2.5	References for 2	139
3	The observed general circulation of the atmosphere (P. SPETH, R.A. MADDEN)	140
3.1	Introduction	140
3.2	Survey of figures and tables	169
3.3	Figures	177
3.4	Tables	290
4	Meteorological organizations (M. SCHLEGEL)	454
4.1	Introductory remarks	454
4.2	Meteorological stations	454
4.3	World Meteorological Organization (WMO)	460
4.4	International programmes	467
4.5	National weather services	470
4.6	European Centre of Medium Range Weather Forecasts (ECMWF)	477
4.7	International non-governmental organizations	479
4.8	Meteorological societies	481
4.9	Meteorological and geophysical journals	482
4.10	List of abbreviations	487
4.11	References for 4	489
