

Acknowledgements

I would like to express my deep and sincere gratitude to my supervisor and the chair of my dissertation committee, Professor Dr. Andreas Bausch, for his support, constructive comments, and excellent advice over the last three years. Furthermore, I am indebted to the members of my dissertation committee, Professor Dr. Adalbert FX Wilhelm and Professor Dr. Hans Georg Gemünden, for their valuable hints and for the time and effort they have spent on reviewing this thesis.

My research was possible thanks to Siemens AG, Munich and Berlin. I owe special gratitude to Professor Dr. Winfried Büttner, Head CT I, and Klaus Kohlmann, Head CT IP MAC, for the opportunity to work as a freelancer for the patent department in Munich over the last three years. In addition, Mr Kohlmann deserves particular credit for his elaborate explanations of the legal nature of intellectual property rights under national and international patent law. My work greatly benefited from his valuable advice and friendly help. I am grateful to Peter Berg, Head CT L&T, and my colleagues in the licensing department for introducing me to the basic principles and strategies of technology licensing.

My especial thanks are due to my colleagues at Jacobs University, Justus-Liebig-University Gießen and Friedrich-Schiller-University Jena for their comments in many fruitful discussions. In particular, I thank Thomas Fritz for his suggestions and cooperation during the last three years.

My most heartfelt acknowledgment must go to my family. I thank my sister, Dr. (iur.) Friederike Grube, for enriching the legal background of my research with economic answers to complex legal questions and my parents, Dr. (phil.) Jochen Grube and Birgit Grube, for support and encouragement – not only during this PhD project. Finally, I owe more than thanks to Jana Schwartz for being such a wonderful partner and a constant source of inspiration over the last few years.

Christian Grube
