Contents

Introduction 1

Part I. Review

I.1 The Stability of Matter: From Atoms to Stars 11

Part II. Exact Results on Atoms

II.1 Lower Bound to the Energy of Complex Atoms (with P. Hertel and W. Thirring) 63
II.2 Improved Lower Bound on the Indirect Coulomb Energy (with S. Oxford) 65
II.3 Monotonicity of the Molecular Electronic Energy in the Nuclear Coordinates 79
II.4 Proof of the Stability of Highly Negative Ions in the Absence of the Pauli Principle (with R. Benguria) 83
II.5 Atomic and Molecular Negative Ions 87
II.6 Bound on the Maximum Negative Ionization of Atoms and Molecules 91
II.7 Approximate Neutrality of Large-Z Ions (with I.M. Sigal, B. Simon and W. Thirring) 103
II.8 Universal Nature of van der Waals Forces for Coulomb Systems (with W. Thirring) 113
II.9 Electron Density Near the Nucleus of a Large Atom (with O.J. Heilmann) 121
II.10 Proof of a Conjecture About Atomic and Molecular Cores Related to Scott's Correction (with A. Iantchenko and H. Siedentop) 127
II.11 Asymptotics of Natural and Artificial Atoms in Strong Magnetic Fields (with J.P. Solovej and J. Yngvason) 147
II.12 Ground States of Large Quantum Dots in Magnetic Fields (with J.P. Solovej and J. Yngvason) 171

Part III. General Results with Applications to Atoms

III.1 Kinetic Energy Bounds and Their Application to the Stability of Matter 193
III.2 Inequalities for the Moments of the Eigenvalues of the Schrödinger Hamiltonian and Their Relation to Sobolev Inequalities (with W. Thirring) 205

III.3 On Semi-Classical Bounds for Eigenvalues of Schrödinger Operators (with M. Aizenman) 241
III.4 The Number of Bound States of One-Body Schrödinger Operators and the Weyl Problem 245
III.5 Variational Principle for Many-Fermion Systems 257

Part IV. Thomas–Fermi and Related Theories

IV.1 Thomas–Fermi and Related Theories of Atoms and Molecules . . . 263
IV.2 The Hartree–Fock Theory for Coulomb Systems (with B. Simon) . 303
IV.3 There Are No Unfilled Shells in Unrestricted Hartree–Fock Theory (with V. Bach, M. Loss and J.P. Solovej) 313
IV.4 Many-Body Atomic Potentials in Thomas–Fermi Theory (with R. Benguria) 317
IV.5 The Positivity of the Pressure in Thomas–Fermi Theory (with R. Benguria) 329
IV.6 The Thomas–Fermi–von Weizsäcker Theory of Atoms and Molecules (with R. Benguria and H. Brezis) 357
IV.7 Analysis of the Thomas–Fermi–von Weizsäcker Equation for an Infinite Atom Without Electron Repulsion 371
IV.8 The Most Negative Ion in the Thomas–Fermi–von Weizsäcker Theory of Atoms and Molecules (with R. Benguria) 383

Part V. Stability of Matter

V.1 Bound for the Kinetic Energy of Fermions Which Proves the Stability of Matter (with W. Thirring) 401
V.2 Stability of Coulomb Systems with Magnetic Fields. I. The One-Electron Atom (with J. Fröhlich and M. Loss) 405
V.3 Stability of Coulomb Systems with Magnetic Fields. II. The Many-Electron Atom and the One-Electron Molecule (with M. Loss) 425
V.4 Stability of Matter in Magnetic Fields (with M. Loss and J.P. Solovej) 437
V.5 The Chandrasekhar Theory of Stellar Collapse as the Limit of Quantum Mechanics (with H.-T. Yau) 443
V.6 One-Electron Relativistic Molecules with Coulomb Interaction (with I. Daubechies) 471
V.7 The Stability and Instability of Relativistic Matter (with H.-T. Yau) 485
V.8 Stability of Relativistic Matter Via Thomas–Fermi Theory (with M. Loss and H. Siedentop) 523
V.9 Stability and Instability of Relativistic Electrons in Classical Electromagnetic Fields (with H. Siedentop and J.P. Solovej) 535

Part VI. The Thermodynamic Limit for Real Matter with Coulomb Forces

VI.1 The Stability of Matter 561
VI.2 Existence of Thermodynamics for Real Matter with Coulomb Forces (with J.L. Lebowitz) 579
VI.3 The Thermodynamic Limit for Jellium (with H. Narnhofer) 583

Part VII. Quantum Electrodynamics

VII.1 Self Energy of Electrons in Non-perturbative QED (with M. Loss) . 607
VII.2 Renormalization of the Regularized Electron-Positron Field (with H. Siedentop) 625
VII.3 Ground States in Non-relativistic Quantum Electrodynamics (with M. Griesemer and M. Loss) 637

Part VIII. Bosonic Systems

VIII.1 Introduction 679
VIII.2 Ground State Energy of the Low Density Bose Gas (with J. Yngvason) 681
VIII.3 Bosons in a Trap: A Rigorous Derivation of the Gross–Pitaevskii Energy Functional (with R. Seiringer and J. Yngvason) 685
VIII.4 The Bose Gas: A Subtle Many-Body Problem 699
VIII.5 The $N^{5/3}$ Law for Bosons 721
VIII.6 The $N^{7/5}$ Law for Charged Bosons (With J.G. Conlon and H.-T. Yau) 725
VIII.7 Ground State Energy of the One-Component Charged Bose Gas (with J.P. Solovej) 757

Publications of Elliott H. Lieb 795
