Contents

III/33 Diffusion in Semiconductors and Non-Metallic Solids

Subvolume A: Diffusion in Semiconductors

1 **General introduction** (D.L. BEKE) . . . 1-1

1.1 Atomic fluxes . . . 1-1
1.2 Equations for diffusion . . . 1-3
1.2.1 Bulk diffusion . . . 1-4
1.2.1.1 Tracer diffusion in a homogeneous matrix . . . 1-4
1.2.1.2 Chemical diffusion . . . 1-6
1.2.2 Grain-boundary diffusion . . . 1-9
1.2.2.1 Self-diffusion . . . 1-11
1.2.2.2 Impurity diffusion and segregation . . . 1-12
1.2.3 Dislocation diffusion . . . 1-12
1.2.4 Surface diffusion . . . 1-12
1.3 Atomic mechanisms of diffusion . . . 1-13
1.3.1 Direct interstitial mechanism . . . 1-14
1.3.2 Indirect interstitial or interstitialcy mechanism . . . 1-14
1.3.3 Ring mechanism . . . 1-14
1.3.4 Vacancy mechanism . . . 1-14
1.3.5 Interstitial-substitutional mechanisms . . . 1-14
1.3.6 Other mechanisms . . . 1-15
1.4 Methods for measuring diffusion coefficients . . . 1-15
1.4.1 Macroscopic methods . . . 1-16
1.4.1.1 Steady-state methods . . . 1-16
1.4.1.2 Non steady-state methods . . . 1-16
1.4.2 Microscopic methods . . . 1-17
1.4.2.1 Relaxation methods . . . 1-17
1.4.2.2 Nuclear methods . . . 1-18
1.5 Temperature, pressure and mass dependence of diffusion . . . 1-18
1.5.1 Temperature and pressure dependence . . . 1-18
1.5.2 Mass dependence . . . 1-19
1.6 Notations, use of the tables . . . 1-19
1.7 Further readings . . . 1-20
1.7.1 Textbooks . . . 1-20
1.7.2 Proceedings . . . 1-20
1.7.3 Collections of data . . . 1-21
1.7.4 Review articles . . . 1-21
1.8 References for 1 . . . 1-21

2 **Diffusion in silicon, germanium and their alloys** (N.A. STOLWIJK, H. BRACHT) 2-1

2.1 Introduction 2-1
2.1.1 Characteristics of diffusion in semiconductors 2-1
2.1.2 Expressions for the diffusion coefficient 2-2
2.1.3 Methods of measurement 2-5
2.1.4 Notations and use of tables 2-6
2.2 Diffusion in silicon 2-12
2.2.1 Tables for 2.2 2-12
2.2.1.1 Solute elements of group IA (hydrogen group) 2-12
2.2.1.2 Solute elements of group IIA (beryllium group) 2-19
2.2.1.3 Solute elements of group IIIB (scandium group including rare earth elements) 2-20
2.2.1.4 Solute elements of group IVB (titanium group) 2-22
2.2.1.5 Solute elements of group VB (vanadium group) 2-23
2.2.1.6 Solute elements of group VIB (chromium group) 2-24
2.2.1.7 Solute elements of group VIIB (manganese group) 2-26
2.2.1.8 Solute elements of group VIII (iron group) 2-28
2.2.1.9 Solute elements of group VIII (cobalt group) 2-30
2.2.1.10 Solute elements of group VIII (nickel group) 2-32
2.2.1.11 Solute elements of group IB (copper group) 2-35
2.2.1.12 Solute elements of group IIB (zinc group) 2-44
2.2.1.13 Solute elements of group IIIA (boron group) 2-47
2.2.1.14 Solute elements of group IVA (carbon group) 2-75
2.2.1.15 Solute elements of group VA (nitrogen group) 2-89
2.2.1.16 Solute elements of group VIA (oxygen group) 2-124
2.2.1.17 Solute elements of group VIIA (fluorine group) 2-130
2.2.1.18 Solute elements of group VIIIA (helium group) 2-132
2.2.2 Figures for 2.2 2-135
2.2.3 References for 2.1 and 2.2 2-196
2.2.3.1 Textbooks 2-196
2.2.3.2 Data collections 2-196
2.2.3.3 Review papers 2-196
2.2.3.4 Articles 2-199
2.3 Diffusion in germanium 2-222
2.3.1 Tables for 2.3 2-222
2.3.1.1 Solute elements of group IA to group VIII 2-222
2.3.1.2 Solute elements of group IB and group IIB 2-223
2.3.1.3 Solute elements of group IIIA 2-225
2.3.1.4 Solute elements of group IVA 2-227
2.3.1.5 Solute elements of group VA 2-228
2.3.1.6 Solute elements of group VIA to group VIIIA 2-230
2.3.2 Figures for 2.3 2-231
2.3.3 References for 2.3 2-237
2.3.3.1 Textbooks 2-237
2.3.3.2 Data collections 2-237
2.3.3.3 Review papers 2-237
2.3.3.4 Articles 2-238
2.4 Diffusion in silicon-germanium alloys 2-241
2.4.1 Tables for 2.4 2-241
2.4.2 Figures for 2.4 2-249
2.4.3 References for 2.4 2-256

3 Diffusion in compound semiconductors (M.B. DUTT, B.L. SHARMA) . . . 3-1

3.1 Introduction . . . 3-1
3.2 Use of tables . . . 3-2
3.3 Experimental methods . . . 3-2
3.4 Evaluation techniques . . . 3-4
3.5 Diffusion in III-V compounds and their ternary alloys . . . 3-6
3.5.1 Self-diffusion . . . 3-6
3.5.2 Diffusion of shalllow donors . . . 3-9
3.5.2.1 Group IV impurities . . . 3-9
3.5.2.2 Group VI impurities . . . 3-10
3.5.3 Diffusion of shallow acceptors . . . 3-14
3.5.4 Diffusion of group I impurities . . . 3-20
3.5.5 Diffusion of other impurities . . . 3-23
3.5.6 Diffusion in III-V compound ternary alloys . . . 3-27
3.6 Diffusion in II-VI compounds and their ternary alloys . . . 3-31
3.6.1 Diffusion of group II and group VI elements . . . 3-31
3.6.1.1 Metal self-diffusion . . . 3-32
3.6.1.2 Chalcogen self-diffusion . . . 3-32
3.6.1.3 Complementary metal and chalcogen diffusion . . . 3-32
3.6.2 Diffusion of group I impurities . . . 3-38
3.6.3 Diffusion of donor impurities . . . 3-40
3.6.3.1 Group III impurities . . . 3-41
3.6.3.2 Group VII impurities . . . 3-42
3.6.4 Diffusion of other impurities . . . 3-44
3.6.5 Diffusion in II-VI compound ternary alloys . . . 3-47
3.7 Diffusion in IV-VI compounds . . . 3-53
3.7.1 Self-diffusion . . . 3-53
3.7.2 Impurity diffusion . . . 3-53
3.8 Diffusion in other useful compounds . . . 3-59
3.8.1 Diffusion in SiC . . . 3-59
3.8.2 Diffusion in some group II-V and V-VI compounds . . . 3-59
Figures for 3 . . . 3-64
3.9 References for 3 . . . 3-70

4 Diffusion in silicides (P. GAS, F.M. d'HEURLE) . . . 4-1

4.1 Introduction . . . 4-1
4.2 Diffusion controlled formation of silicide thin films . . . 4-5
4.3 Diffusion controlled formation of "bulk" silicides . . . 4-12
4.4 Tracer diffusion in silicides . . . 4-15
Figures for 4 . . . 4-21
4.5 References for 4 . . . 4-35

5 Chemical diffusion in semiconductors (C.M. BRUFF, G.E. MURCH) . . . 5-1

5.1 Introduction . . . 5-1
5.2 Use of the tables . . . 5-2
5.3 Data . . . 5-3
Figures for 5 . . . 5-9
5.4 References for 5 . . . 5-25

6 **Grain-boundary and dislocation diffusion in semiconductors and silicides** (G. Erdélyi, D.L. Beke) . . . 6-1

6.1 Introduction . . . 6-1
6.1.1 General remarks . . . 6-1
6.1.2 Methods of measurements . . . 6-1
6.1.2.1 Low angle grain boundary method . . . 6-1
6.1.2.2 Defect annealing method . . . 6-2
6.1.2.3 Pavlov-Panteleev method . . . 6-2
6.1.2.4 Indirect methods in type-A kinetic regime . . . 6-2
6.1.2.5 Determination of double products from creep and sintering experiments . . . 6-2
6.1.2.6 Isoconcentration contour method . . . 6-2
6.1.2.7 Hwang-Balluffi method . . . 6-3
6.1.2.8 First appearance method . . . 6-3
6.1.2.9 Gilmer-Farrell method . . . 6-3
6.2 Use of tables and figures . . . 6-4
6.2.1 Some general remarks . . . 6-4
6.2.2 Practical guide to the use of the tables . . . 6-4
6.3 Dislocation diffusion in semiconductors . . . 6-6
6.4 Grain-boundary diffusion in semiconductors and silicides . . . 6-9
6.4.1 Grain-boundary diffusion in elemental semiconductors . . . 6-9
6.4.2 Grain-boundary diffusion in compound semiconductors . . . 6-16
6.4.3 Grain-boundary diffusion in silicides . . . 6-17
Figures for 6 . . . 6-20
6.5 References for 6 . . . 6-24

7 **Surface diffusion on semiconductors** (E.G. Seebauer, C.E. Allen) . . . 7-1

7.1 Introduction . . . 7-1
7.1.1 General remarks . . . 7-1
7.1.2 Definitions of diffusion parameters . . . 7-1
7.2 Experimental techniques . . . 7-2
7.2.1 Single-atom imaging . . . 7-2
7.2.2 Electron diffraction . . . 7-3
7.2.3 Chemical state relaxation . . . 7-3
7.2.4 Spin axis relaxation . . . 7-4
7.2.5 Profile evolution . . . 7-4
7.2.6 Capillarity-driven effects . . . 7-5
7.2.7 Island growth . . . 7-5
7.2.8 Miscellaneous . . . 7-6
7.3 Physical picture . . . 7-6
7.3.1 Intrinsic diffusion . . . 7-6
7.3.2 Mass transfer diffusion . . . 7-6
7.4 General correlations . . . 7-8
7.4.1 Intrinsic diffusion . . . 7-8
7.4.2 Mass transfer diffusion . . . 7-8
7.4.3 Adsorbate concentration dependence . . . 7-9
7.5 Commentary to tables . . . 7-9
7.6 Surface diffusion tables . . . 7-10
Figures for 7 . . . 7-13
7.7 Special references: review articles . . . 7-17
7.8 References for 7 . . . 7-18
