

Acknowledgements

An idea that merits examination is a sine qua non for a doctoral thesis. My studies at the University of St.Gallen and the inspiring atmosphere in the Asset Allocation & Research department of LGT Capital Management provided me with the roots and wings to pursue academic merits. In particular, I am very grateful for having met Professor Pascal Gantenbein, who inspired me at the very beginning of my academic career and supported my academic development until the very end. Hence, first and foremost, my deepest gratitude is to Professor Pascal Gantenbein. I also would like to thank Professor Andreas Grüner for co-supervising this study and providing thoughtful comments and suggestions.

Furthermore, I am also greatly indebted to Dr. Magnus Pirovino and Walter Pfaff from LGT Capital Management. Both create an open platform for the thoughts of their employees and give advice as well as support whenever needed for new ideas. One of these ideas – the integration of scenario methodology in asset allocation – fascinated all three of us. Their guidance, enthusiasm and the financial support enabled this project.

Moreover, I am very grateful to all scenario workshop participants for their essential contributions. Firstly, Professor Minx, Dr. Frank Ruff and Dr. Burkhard Järisch from Daimler AG, who contributed extensive scenario analysis know-how. Secondly, with Damian von Stauffenberg, Patrik Huber and Dr. Annette Krauss three highly regarded microfinance specialists donated some of their valuable time to give me and all other workshop participants an insight into microfinance. Thirdly, many more colleagues of LGT Capital Management spent time to create microfinance scenarios – Johannes Oehri, Hanspeter Oehri, Dr. Matthias Feiler, Mark Rall, Dr. Marie Mikl, Michael Simmeth, Oliver Karius and Wolfgang Hafenmayer. Their input in the scenario workshops are a principal component of my thesis.

Finally, many close friends and my family supported me during the inspiring but sometimes difficult times of writing this thesis. Their contribution is invaluable.
